

HIPS PBF Survey 2020 Purple-Based Foliage (PBF)

PBF observations should be made when the subject iris is in bloom or one week +/-

If you want to report observations made at other times in the season it needs to be done separately.
A suggested form is available by request. Contact the Survey Coordinator to obtain a copy.

Only report irises located in your garden.

Determining PBF from photographs can be unreliable! We recommend reporting based on direct field observation.

Reasonably verify the ID of reported irises. Bloom exam completed. Source known. AIS wiki check. HIPS forum post if questions. We generally discourage reporting irises deriving from noids & unknowns.

If the iris has PBF but verification is not yet complete due to lack of information or there are comparison irises that differ in PBF you may report them as Study irises. Write STUDY before the iris names and briefly describe situation in Comments.

Reporter names and contact info are not disclosed outside the program team unless reporter gives permission.

Email reports to the Survey Coordinator at: PBFsurvey@historicism.com

To obtain a mailing address for hard copy (paper) reports contact the coordinator.

Please contact the Coordinator if there are any questions or comment!
